

Element E

1. For sun protection, I think that math would apply to that the most because you need to make the shade to where the plant gets a certain amount of sun and also shade.
2. I think that durability applies to engineering because you have to build it the best that you can to keep it durable.
3. I think that size applies to math because you have to measure out the platform and make sure you get the right dimensions. You have to make sure you get the exact 10 x 20 inch platform.
4. I think that support applies to technology because we need to use the tech of the platform to make it able to put more and more plants and also heavier plants.
5. Programibility goes hand and hand with technology because the tech lets the plant form, move and function.
